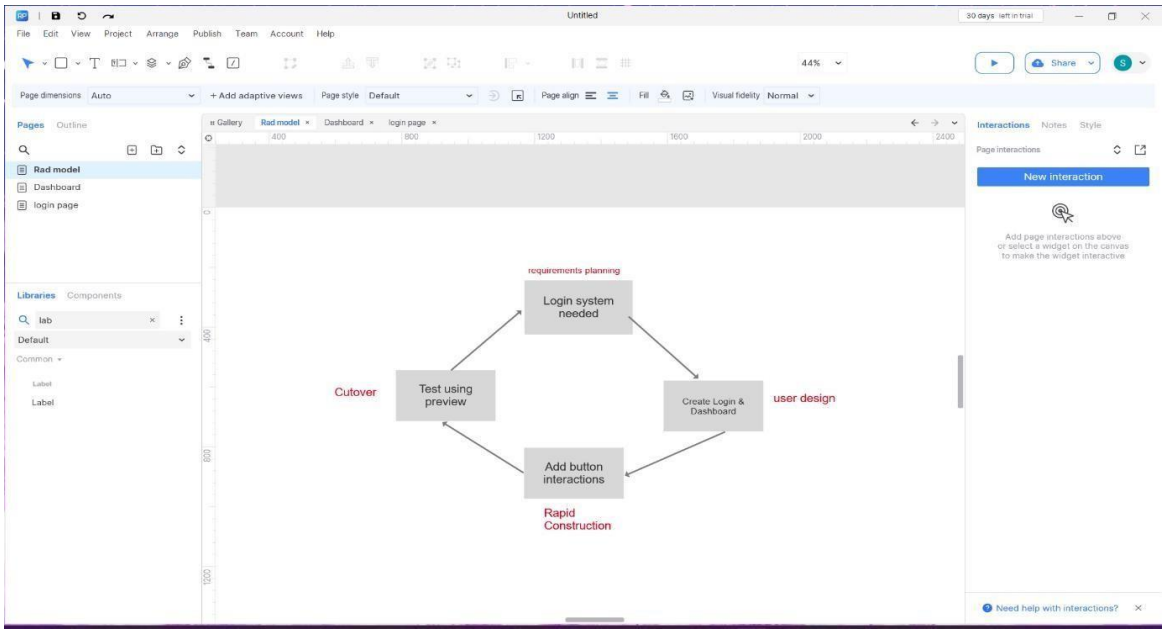
RAD MODEL

WHAT IS RAD MODEL?

(RAD) MODEL IN USER INTERFACE (UI) DESIGN AND SOFTWARE ENGINEERING IS AN ITERATIVE, AGILE METHODOLOGY THAT PRIORITIZES RAPID PROTOTYPING, USER FEEDBACK, AND FAST DEVELOPMENT CYCLES OVER LONG-TERM, RIGID PLANNING. IT IS SPECIFICALLY DESIGNED TO CREATE HIGH-QUALITY, FUNCTIONAL SOFTWARE QUICKLY BY INVOLVING USERS THROUGHOUT THE PROCESS, MAKING IT IDEAL FOR UI-DRIVEN PROJECTS.

MODEL CHOOSEN: DESIGN AND DEVELOPMENT OF A LOGIN INTERFACE USING RAD MODEL.

<u>DIAGRAMMATIC REPRESENTATION OF RAD MODEL</u>:



1. THE RAPID APPLICATION DEVELOPMENT (RAD) MODEL WAS USED TO DESIGN AND DEVELOP A SIMPLE LOGIN INTERFACE. IN THE **REQUIREMENTS PLANNING PHASE**, THE NEED FOR A USER AUTHENTICATION SYSTEM WAS IDENTIFIED, WHERE USERS CAN ENTER A USERNAME AND PASSWORD TO ACCESS A DASHBOARD. IN THE **USER DESIGN PHASE**, THE LAYOUT OF THE APPLICATION WAS CREATED, INCLUDING THE LOGIN PAGE WITH INPUT FIELDS AND A BUTTON, AND THE DASHBOARD PAGE WITH A WELCOME MESSAGE AND LOGOUT OPTION. IN THE **RAPID CONSTRUCTION PHASE**, THE INTERFACE WAS IMPLEMENTED USING AXURE RP, WHERE INTERACTIONS SUCH AS NAVIGATION FROM LOGIN TO DASHBOARD AND BACK WERE ADDED USING BUTTON ACTIONS. FINALLY, IN THE **CUTOVER PHASE**, THE PROTOTYPE WAS TESTED USING THE PREVIEW FEATURE TO ENSURE THAT ALL FUNCTIONALITIES, INCLUDING LOGIN AND LOGOUT NAVIGATION, WERE WORKING CORRECTLY. THUS, THE RAD MODEL ENABLED QUICK DEVELOPMENT AND TESTING OF THE USER INTERFACE.

1. REQUIREMENTS PLANNING

- IDENTIFIED NEED FOR A LOGIN SYSTEM
- USER SHOULD ENTER USERNAME AND PASSWORD
- SYSTEM SHOULD NAVIGATE TO DASHBOARD
- SIMPLE AND USER-FRIENDLY INTERFACE REQUIRED

---

2. USER DESIGN

- CREATED LOGIN PAGE LAYOUT
- ADDED USERNAME AND PASSWORD FIELDS
- DESIGNED DASHBOARD PAGE
- PLACED BUTTONS AND LABELS PROPERLY

---

3. RAPID CONSTRUCTION

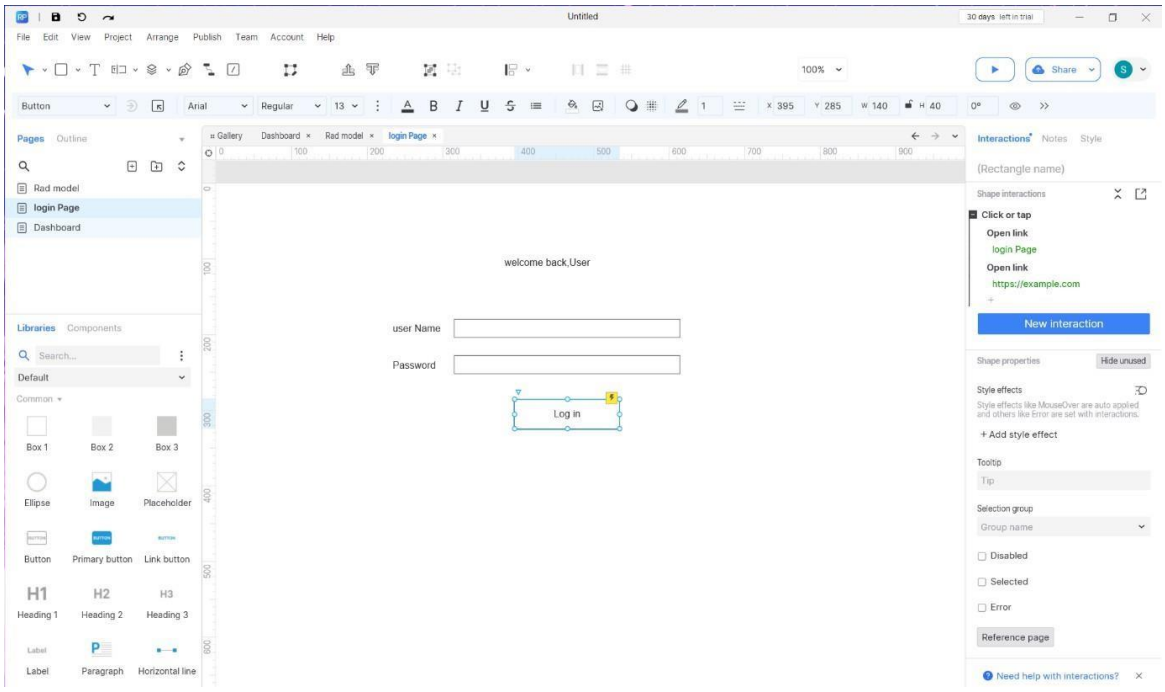
- IMPLEMENTED UI USING AXURE RP
- ADDED LOGIN BUTTON INTERACTION
- LINKED LOGIN → DASHBOARD
- ADDED LOGOUT BUTTON → BACK TO LOGIN

---

4. CUTOVER (TESTING)

- TESTED USING PREVIEW MODE
- VERIFIED LOGIN NAVIGATION WORKS
- VERIFIED LOGOUT FUNCTIONALITY
- CHECKED OVERALL UI FLOW

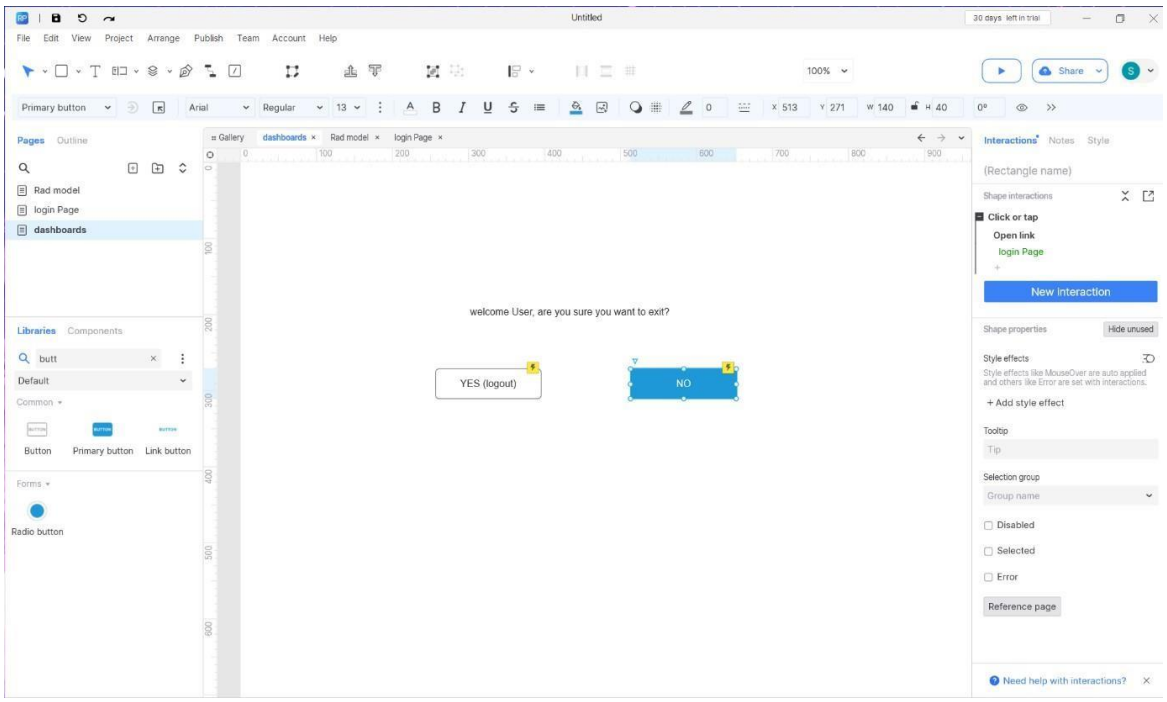
LOG IN PAGE FOR USER CREDENTIALS:



- THE LOGIN PAGE IS THE MAIN INTERFACE OF THE SYSTEM WHERE USERS ENTER THEIR CREDENTIALS TO ACCESS THE APPLICATION. IT CONTAINS INPUT FIELDS FOR ENTERING THE USERNAME AND PASSWORD, ALONG WITH A LOGIN BUTTON TO SUBMIT THE DETAILS. THE DESIGN IS SIMPLE AND USER-FRIENDLY, ENSURING EASY INTERACTION. WHEN THE USER CLICKS THE LOGIN BUTTON, THE SYSTEM NAVIGATES TO THE DASHBOARD PAGE. THE LAYOUT IS PROPERLY ALIGNED WITH CLEAR LABELS FOR EACH FIELD TO ENHANCE USABILITY.
- THE LOGIN PAGE ALLOWS USERS TO ENTER THEIR USERNAME AND PASSWORD TO ACCESS THE SYSTEM. IT INCLUDES INPUT FIELDS AND A LOGIN BUTTON, AND PROVIDES NAVIGATION TO THE DASHBOARD PAGE.

- WHEN PREVIEWED THE USER LOG IN PAGE IS DIRECTED TO AN PAGE WHEN USER ENTERS HIS LOG IN CREDIENTIALS AND GIVE LOG IN PASSWORD TEN BY GIVING “LOG IN” BUTTON ITS ROOT IS DIRECTED TO THE REQUIRED WEBPAGE.

DASHBOARD :



1. THE DASHBOARD PAGE IS DISPLAYED AFTER A SUCCESSFUL LOGIN AND SERVES AS THE MAIN INTERFACE OF THE APPLICATION. IT PROVIDES A WELCOME MESSAGE TO THE USER AND INCLUDES A LOGOUT BUTTON FOR EXITING THE SYSTEM. THE DESIGN IS SIMPLE AND EASY TO UNDERSTAND, ALLOWING SMOOTH NAVIGATION. WHEN THE USER CLICKS THE LOGOUT BUTTON, THE SYSTEM REDIRECTS BACK TO THE LOGIN PAGE. THE DASHBOARD ENSURES A CLEAR AND USER-FRIENDLY INTERACTION EXPERIENCE.

2. BY THIS SYSTEM WE CAN ENSURE TH SAFETY LOG OUT FOR THE USER BY RUNNING THE PREVIEW WE GET THE WARNING SIGN INDICATING USER SURELY WANTS TO LOG OUT THE INTERFACE BY THIS MEANS USER CAN ENSURE SECURITY AND IF GIVEN YES IT COMES OUT (LOGOUTS). IF GIVEN NO THEN THE INTERFACE AUTOMATICALLY RETURNS TO THE LOG IN PAGE. BY THIS WAY THE EFFIENCIENCY OF THE RAG MODEL IS ARCHIEVED.

ADVANTAGES.

- FASTER DEVELOPMENT COMPARED TO TRADITIONAL MODELS
- EASY TO MODIFY AND UPDATE UI AT ANY STAGE
- CONTINUOUS USER FEEDBACK IMPROVES DESIGN QUALITY
- QUICK PROTOTYPING AND TESTING
- REDUCES DEVELOPMENT TIME AND EFFORT
- SUITABLE FOR SMALL AND MEDIUM UI-BASED PROJECTS

DIADVANTAGES

- NOT SUITABLE FOR LARGE AND COMPLEX SYSTEMS
- REQUIRES SKILLED DEVELOPERS/DESIGNERS
- DEPENDS HEAVILY ON USER INVOLVEMENT
- DIFFICULT TO MANAGE WITHOUT PROPER PLANNING
